

While visual charts are helpful, we are looking for a robust **report view** rather than a purely graphical representation. To provide some clarity, I've outlined our specific requirements below.

Our primary goal is to find a dashboard integration plugin that aligns with how our users currently utilize the **Time Tracker** plugin. Within that tool, we've been testing the "Timesheet" and "Time Tracker" report types. The Timesheet report works exactly as expected when we need to track worklog hours by User—specifically because it provides that clear monthly view of hours worked.

However, we need to extend that functionality. Here are the key points we're looking for:

- **Grouping & Categorization:** We need to generate that same monthly hour report, but with the ability to **Group or Categorize by Custom Fields or Components or set of Projects**.
- We require the **Date** selection to support dynamic, relative ranges—such as This/Previous Month, Quarter, and Week—to ensure our reports update automatically without manual adjustments.

Report:
Timesheet

- Timesheet
- Calendar
- Timespent
- Pivot by User
- Pivot by Status
- Pivot by Label
- Time Tracking

End Date
2025-12-31

- Template Replication:** In our Data Center environment, we relied on default templates from the *Time Tracking and Billing Report Collection*. Is it possible to replicate those specific report (Billing) structures within the Time Tracker plugin in Cloud?

The name of the template. One should use a reference to a key in the labels file.

Primary File [Edit](#)

The path and name of the primary template

Enabled

Whether or not this template is enabled. If false the template will not be visible.

Corresponding Report Template Key

Gadget templates can be associated with a report.

Description

A description of the template.

Updated add-on version 7.4.0

Billing

Whether or not this is a template used for billing.

Template Type Report Duration
 Report Period
 Report Complete
 Gadget Duration
 Gadget Period
 Gadget Complete
 Issue Tab
 Project Tab
 Page Tab

The Template Type defines in which context the template will be visible.

- **UI/Display Customization:** Regarding the view itself, we'd like to know if we can:

- Enable **pagination** (e.g., showing entries 1-10, 11-20, etc.) to keep the dashboard clean.
- Manually adjust **column widths** to fit our data better.
